DESCRIPTION
The MA785A is a compact trigger transformer designed for triggering spark gaps.

FEATURES
- Trigger voltage up to 40 kV
- Fast rise time - pulses up to 30 kV/μs
- Flame retardant - approved to UL94 V-2
- Polarity identification - positive or negative pulses can be obtained by appropriate connection

ELECTRICAL AND PHYSICAL CHARACTERISTICS (at 20 °C)
All ratings given are absolute and non-simultaneous. It is the equipment designer’s responsibility to ensure that they are not exceeded. Typical values given are for e2v technologies’ triggered spark gaps.

ENVIRONMENTAL PARAMETERS
Storage temperature: -40 to +70 °C
Operating temperature: -32 to +70 °C
Mechanical shock, half-sine: 981 m/s²
Vibration (20 to 500 Hz): 96.6 m/s²
Net weight: 80 g approx

NOTES
(All notes apply to maximum ratings unless stated)
1. Measured at the primary leads.
2. Input energy is drawn from a 1 μF capacitor (0.47 μF capacitor typically).
3. A 10 kΩ wirewound 3 W (minimum) series resistor must be included in the output circuit to protect the secondary winding against excessive high voltage spikes.
4. HT is at the end remote from earthed surfaces.
5. Measured at a maximum repetition rate of 100 pps on the unloaded output pulse with a 200 V primary input voltage measured at the primary leads.
6. Average value measured between 25% and 75% of peak voltage.
